【HCG sponsors a special prize - RECER indoor cooling device- Designer | YANG ZIH SYUAN】

- **Design Concept** : Focusing on the cooling properties of ceramics, inspired by the Muscatese evaporation system, this design utilizes recycled materials from ceramic waste and reservoir sludge, combined with ceramic 3D printing technology to create porous ceramic structures, resulting in a passive cooling device that requires no significant electricity.
- **Cooling Principle** : Utilizing the porosity of ceramics, water vapor evaporates and dissipates heat, effectively lowering indoor temperatures.
- **Product Features** : Surface grooves enhance evaporation efficiency, resulting in a natural, understated appearance that blends seamlessly into any space.
